

## Equivalent Fractions Level 1

Find these equivalent fractions. **Show me what form of one you used in order to find them.**

$$\frac{5}{10} = \frac{\quad}{40} \quad \frac{3}{5} = \frac{\quad}{15} \quad \frac{6}{7} = \frac{\quad}{49}$$

$$\frac{1}{3} = \frac{\quad}{21} \quad \frac{4}{6} = \frac{\quad}{36} \quad \frac{3}{21} = \frac{12}{\quad}$$

$$\frac{2}{12} = \frac{10}{\quad} \quad \frac{11}{21} = \frac{55}{\quad} \quad \frac{10}{25} = \frac{\quad}{100}$$

Put these fractions in order from least to greatest.  
Use equivalent fractions to prove your order  
(that means find equivalent fractions that all  
have the same denominator).

First group:  $\frac{6}{8}$        $\frac{7}{10}$        $\frac{14}{16}$        $\frac{50}{80}$

Second group:  $\frac{1}{2}$        $\frac{2}{8}$        $\frac{5}{9}$        $\frac{12}{20}$
